

# CNC Production Machining

Location: Windsor, California

## About Micro-Vu

Micro-Vu is an automation company specializing in 3D measuring and robotics. Micro-Vu engineers use technologies such as 3D software, image processing, precision mechanics and motion control, lasers, tactile probes, 3D sensors, machine learning and robotics to develop state-of-the-art solutions.

Micro-Vu designs and manufactures in a highly-automated factory at its campus in Windsor, California near the Russian River. Micro-Vu was established in 1959 and is privately-held. Those who work at Micro-Vu must be highly-motivated, capable and passionate about bringing the best possible products and technologies to the market.

## Job Summary

Our company is currently seeking people to set up and operate CNC machining centers. Other responsibilities may include equipment maintenance, part inspection and general shop duties in our busy engineering-oriented manufacturing facility. The ideal candidate will have machining experience and preferably some CNC programming knowledge. The successful applicant will be responsible for operating production and prototyping equipment, finishing products and reporting any issues with equipment to engineering and other disciplines.

Pay rate and future compensation will depend on several factors including education, capabilities, skill set and especially contribution to the success of the company.
